Screw type compressors [1] should not be installed in air systems with reciprocating compressors without means of isolation such as a common receiver tank. It is recommended that both types of compressor be piped to a common receiver using individual air lines. Page 18 INSTALLATION / HANDLING 89210074eÁÁÁ2 Revision 00 10/97 CAUTION The use of plastic bowls on line filters and other plastic air line components without metal guards can be hazardous. Their safety can be affected by either synthetic or or the additives used in mineral oils. Discharge piping should be at least as large as the discharge connection of the compressor. All piping and fittings should be suitably rated for the discharge pressure. OPERATING INSTRUCTIONS PRIOR TO STARTING 1. Check coolant level. Add if necessary. 1. PRESSURE GAUGE Indicates the pressure immediately after the aftercooler. DO NOT The reservoir is designed to prevent overflow. With warm unit stopped operate the compressor at discharge pressures over the rated in the normal way, the sight tube level should be within 15mm of the top pressure.
